Ken Murphy : Blinkybug]: Make Your Own Electronic Insects before purchasing it in order to gage whether or not it would be worth my time, and all praised Blinkybug]: Make Your Own Electronic Insects:

16 of 16 people found the following review helpful. great dadson projectBy Nicolas BBought this to do as a project with my 5-yr old son, thinking that it should be within my technical abilities, and thankfully it was :)The packaging is great, everything contained neatly in a hardcover book with resealable parts storage. The instructions are very clear yet fun, thanks to the comics style.Putting everything together was easy and fun. Reading through the book, assembling two bugs, and explaining basic electricity concepts took about an hour, with a lot of easier steps that even a 5-yr-old can help with. I think a 10-yr-old could easily do it by himself/herself.My son was thrilled with the result, see attached customer pic. He made the black with red eyes scary vampire one, and I made the not-scary-at-all orange looser who apparently is gonna get its butt kicked by the vampire one, or so he says...0 of 0 people found the following review helpful. Purchased BlinkyBugs for my 7 year old brother, a HUGE HIT!By Leah TumermanBlinky Bugs proved an

awesome Holiday present for my little brother. He was not only immediately excited to get into creating the bugs, but also attentive to the entire building process due to Ken's accessible and engaging project interface. The comic book style was appealing to Kaleb and very easy to follow. I also benefited from Ken's clear directives, as I am not at all scientifically inclined! Any adult can walk a child through building Blinkies, and most advanced or technically skilled children will do just fine on their own. I am hoping we can figure out how to access more parts as I assume Kaleb will want to build more than the three included bugs! What a fantastic introduction to electronics! Thanks Ken!

By Greenbi Hi, I am the lucky parent of a kid who is very curious and just loves to create things. Recently he read about diodes, and at school he was building electrical circuits. When I read the description of the Blinkybugs I just knew it would be a perfect fit for him. I was right. My eleven year old spend two days absorbed in the kit and was very proud of his creations. He then went on to explain to me in great details how diode's physical design leads to their specific colour. A great gift for a young mind with scientific curiosity.

Many thanks, Greenbi

These fuzzy, brightly colored, illuminated pets will teach kids all about electricity and circuitry. Everything kids need to build three bugs is in here: coin-cell batteries, colored pipe cleaners, copper tubes, red, yellow, and green LEDs, pom-poms, and more! Step-by-step instructions are presented in a compelling comic book format.
