I am interested in more background information.1 of 1 people found the following review helpful. This book is a must have. When I was ...By Jon GausmanThis book is a must have. When I was in High school, I made a plane from this book, entered the district science fair, and took the aerodynamics competition, setting a record. The whole place stopped, and watched. One of my gliders was aloft in the gym for over 3 minutes!1 of 1 people found the following review helpful. Perfect companion for the PowerUp moduleBy B. HannifinI've owned

this book for over 20 years now. I now have 3 young boys who are all significantly interested in such toys. Now with the advent of a PowerUp module, i will definitely have this book out more often. An excellent example of what you can achieve with this book would be a Skyhawk I made while visiting relatives back in 1992. The airplane was so finely tuned that my brother and I were able to toss the plane back and forth from over 15 feet away...with the plane flying on a perfectly level and straight flight path. That airplane is still able to be flown just as it was on the first day, since i used 70lb laser bond paper to construct it. This book also helps teach you aerodynamics (basic anyway), and flight principles.
